***Claim Rejections - 35 USC § 112***

Claim 13-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 13 "method which is essentially composed of" is not clear if open or closed language is intended. Clarification can be achieved by using language such as a solid support ... comprising or consisting of ... .

Claim 18 is confusing as to what steps or structures are required to achieve measurement in an atmosphere saturated with water. It is noted that ambient air is saturated with water and could be read on the claimed atmosphere.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 13-21 are rejected under 35 U.S.C. 102(b,e) as being clearly anticipated by Goodwin or Rava et al. respectively.

Goodwin teaches a hydrophilic solid support with wells coated and isolated by a hydrophilic compound. The wells are in a 96 well pattern on a 2 inch by 3 inch slide

Art Unit: 1743

where the diameters of the wells are from 0.5mm-7mm which is read on the claimed greater than 10 wells per square centimeter (see column 6).

Rava et al. Teach a DNA chip assay device made of a hydrophilic material where the individual wells are isolated by hydrophobic materials (see column 8 lines 28+). In column 10 line 40 the plate is taught as having 10,000 addresses/measurement points per square centimeter which reads on the claimed greater than 10.

In the absence of better defining what steps are intended in claim 18 where the analytical measurement is carried out in an atmosphere "virtually saturated with water vapor", it is maintained any laboratory environment will meet this limitation.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lyle A Alexander whose telephone number is 703-308-3893. The examiner can normally be reached on Monday, Wednesday and Friday.
